

- Scenario: Data is entered in the CW user interface and in batch for the same patient/clinic:
If the end user updates a saved 2728 via the CW user interface with additional “saved” data, will subsequent batch submissions of “saved” data overlay what was input via the CW user interface? Can CW prevent the system from accepting subsequent batch changes to data fields entered via the CW user interface?
Batch submissions of “saved” data will overlay what was input via the CW user interface. CW cannot prevent the system from accepting subsequent batch changes for “saved” data.
- Does CW impose a time limit on accepting “Save” XML transactions? Or will all XML transactions be processed? If the question is “Is there a limit to the amount of save transactions?” then the answer is no.
- Will the CW system provide feedback on a successful submission of 2728 XML? Are just the key fields identified in the feedback XML, or do we see all of the data which was submitted? What about the data entered via the UI? The Feedback files don’t indicate the successful submission of a 2728 XML. Right after uploading a 2728 XML file, the user can click the Patient Processing Summary link, which would display if the file was processed and if the file (record) had any errors. If there are errors, the 2728 form will not be submitted:

Facilities	Patients	Personnel	Reports	My Reports	EDI	Clinical	Form 2744	Action List	Admin

CROWN File ID	File Name	Upload Date/Time	Processing Date/Time	Status	Total Records	Total Records Processed	Records with Errors	Records with Warnings
32762	Mister Submit-Submit-2728.xml	05/28/2014 01:31:57 PM	05/28/2014 01:32:19 PM	Completed	1	1	0	0

- Will the CW system pick up the following data from the Patient record previously submitted in Batch or will the 2728 XML fields need to be populated with values? Are there any additional fields not listed below which are picked up by the CW system from previously processed Patient XML or Patient UI transactions? The fields below don’t need to be included in the 2728 XML if they already exist in CW (I added one more to the list):

lastName
firstName
middleInitial
suffix
hicnum
ssn
dob
addressType
street1
street2
city
state
zip
zipExt
county
areaCode
phoneNumber
gender
selfReported
ethnicity
countryOfOrigin

raceCode
TribeCode
currentEmploymentStatus

5. If CW system will use data from the previously processed Patient file, FMC would like to submit the 2728 in a given week, after the Patient file is processed in CW to take advantage of the latest patient data submitted. FMC's current window for data submissions is Monday and Tuesday of each week. When should 2728 XML data be submitted to CW? If the Patient files are processed on Monday, the 2728s can be submitted on Tuesday.
6. How would a saved 2728 form be deleted in CW? A saved 2728 form upload via Batch can be deleted in the SUI or the saved 2728 can be overwritten with the submission of another 2728 XML in a "Saved" or "Submit" status.
7. GFRCalculationMethod is requested in the XML, yet the GFR value is not requested. Please explain why this field is required in CW. Is there a field in the CW UI to enter this data? The GFR calculations are done as backend processing. The user is only required to provide the GFR Calculation Method.
8. Is there a rule in CW regarding acceptance of the 2728 XML within 45 days of the date of regular dialysis began (Form field 24)? There is a rule within the CMS 2728 form that states that they need to submit lab values within 45 days prior to the most recent ESRD episode.
9. Does CW recognize a form that was "submitted" via the CW user interface and reject subsequent "save" transactions in batch for the same patient/clinic? Yes.
